DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/25/2006 has been entered.

Response to Amendment

2. The reply filed 1/25/2006 was applied to the following effect: All relevant objections and rejections are withdrawn as being satisfied.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Cancel claims 17-34.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Gustavo Siller on Wednesday, 3/29/2006.

Reasons for Allowance

4. Claims 1, 2 and 9-16 are allowed.

The following is an examiner's statement of reasons for allowance:

This application is for an EXCHANGE COUPLING FILM AND MAGNETORESISTIVE ELEMENT USING THE SAME.

- **Claim 1** specifies an exchange coupling film, which requires:

"in a section of the exchange coupling film in parallel with a thickness direction thereof, crystal grain boundaries formed in the antiferromagnetic layer and crystal grain boundaries formed in the ferromagnetic layer extend in nonparallel direction with respect to an interface between the ferromagnetic layer and antiferromagnetic layer and are discontinuous in a least a portion of the interface."

Hasegawa '647 discloses an exchange coupling film comprising an antiferromagnetic layer [4] and a ferromagnetic layer [3], which are formed in contact with each other so that the magnetization direction of the ferromagnetic layer is pinned in a predetermined direction by an exchange coupling magnetic field produced at the interface between both layers, wherein the antiferromagnetic layer is made of an antiferromagnetic material comprising an element X (at least one element selected from Pt, Pd, Ir, Rh, Ru, and Os) and Mn; [Hasegawa English translation, section 0017] and in a section of the exchange coupling film in parallel with the thickness direction thereof, the crystal grain boundaries formed in the antiferromagnetic layer and the crystal grain boundaries formed in the ferromagnetic layer are discontinuous in at least a portion of the interface [Hasegawa English translation, section 0017].

However, Hasegawa '647 does not show, teach or suggest in a section of the exchange coupling film in parallel with a thickness direction thereof, crystal grain boundaries formed in the antiferromagnetic layer and crystal grain boundaries formed in the ferromagnetic layer

extend in nonparallel direction with respect to an interface between the ferromagnetic layer and antiferromagnetic layer and are discontinuous in at least a portion of the interface as claimed in the present invention.

Therefore, these features, in combination with other features of claim 1, are not anticipated by, nor made obvious over, the closest prior art of record of Hasegawa et al. (JPO English machine translation of JP 11-191-647, publication date 7/13/1999).

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
